24. Description of Change: (use additional sheets if necessary)
The EcTsDsClientDriver Package is currently supplied as a test tool with no support. The test procedures and the DAACs have integrated this tool into the system. As the system currently is defined there is no way to search for and distribute certain granules on an adhoc basis if they are not in the valids set for EDG. This is required to resubmit distribution requests for certain granules when distribution fails. As a result of this, the DAACs have integrated this tool into their operation procedures. This tool is needs to be integrated into the baseline for maintenance along with the SDSRV package.

25. Proposed Solution: (use additional sheets if necessary)
Add the EcTsDsClientDriver Package to the ECS Baseline

26. Alternate Solution: (use additional sheets if necessary)
Make source code available to the DAACs

27. Consequences If Change(s) are not approved: (use additional sheets if necessary)
Changes in baseline affect the EcTsDsClientDriver Package but do not automatically get integrated into the tool. This reults in a tool that no longer functions that is required byu the DAACs to operate but is not maintained by any group in a timely manner.
